

BLUE STAR

**HAPPINESS IS A
FAST COOLING AC.**

2023 AIR CONDITIONERS RANGE

About Blue Star

With nearly eight decades of experience in providing expert cooling solutions, Blue Star is India's leading air conditioning and commercial refrigeration company. Built on trust, Blue Star is recognised as an industry leader and is known for innovation, quality and durability across the globe. The Company offers a comprehensive range of products that are not only technologically advanced but also sustainable, energy-efficient and intuitively designed.

QUALITY

RELIABILITY

DURABILITY

The Company's commitment to quality further extends to ensure every product is designed, engineered and manufactured for reliability and increased durability.

BLUE STAR INVERTER TECHNOLOGY

This technology incorporates variable speed compressors that can intelligently vary frequency according to the ambient conditions of the room or when there are more people in the room, thereby delivering exceptional cooling and maximum energy savings.

Fixed-Speed Compressor

Operates either at full capacity or not at all.

RUNS AT A FIXED SPEED OR STOPS

Inverter Compressor

Adjusts output according to its surroundings because it can run at variable speeds.

CONTINUOUSLY RUNS AT VARIABLE SPEEDS

HIGH COOLING PERFORMANCE

Designed for High Ambient Conditions

Most air conditioners are designed to efficiently deliver cooling at 35°C*. Blue Star Air Conditioners are designed to perform at even during harsh summers as high as 56°C*.

Lower Deration Effect

Blue Star Air Conditioners ensure 100% cooling capacity* even at a higher temperature of 43°C, and continue to cool even at 48°C with minimal deration.

Inverter Air Conditioners Deliver 100% Cooling even at 43°C

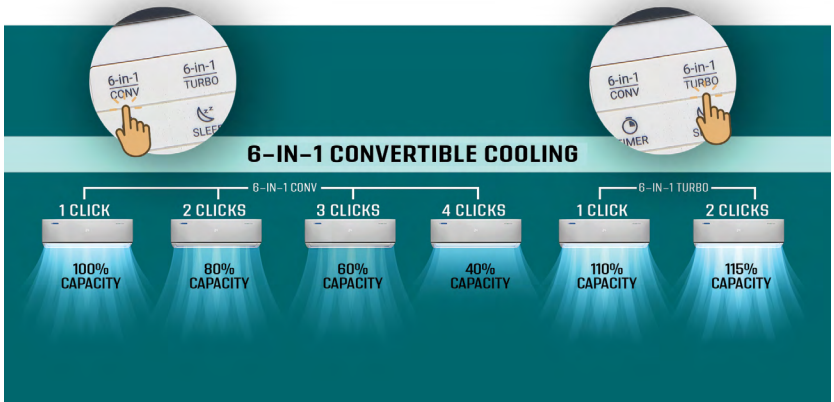

Images shown above are for visual representation only. Actual images may vary. Features may also vary from model to model.

*Performance standards and output vary from model to model based on ambient conditions and maintenance of air conditioners at periodic intervals. Under standard test conditions.

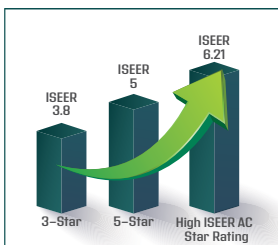

CONVERTIBLE COOLING

This technology enables the user to set the AC to the preferred cooling capacity depending on the ambient conditions or personal comfort requirements. The user can choose the capacity they want to operate at, and enjoy perfect cooling at the touch of a button. The user can step-down the AC capacity using the convertible cooling button on the remote, right from 100% to 80%, 60% and even 40%. In addition, using the turbo cool button, the user can step-up the AC capacity for faster cooling wherein the AC will work more than 100% of its rated capacity for a set time. While some of the inverter models are equipped with a 6-in-1 convertible cooling feature, the rest offer 5-in-1 convertible cooling.

SUPER ENERGY-EFFICIENT

Blue Star's Dynamic Drive Design Technology is a unique engineering design where the inverter drive and the compressor are balanced to achieve enhanced energy efficiency, resulting in optimised cooling capacity. As a result, the new 1.0 TR Inverter Split Air Conditioners achieve 6.21 High ISEER, which is 24%* more than the current 5-Star ISEER requirements and 63%* more energy-efficient than a 3-Star Rated Inverter Split Air Conditioner.

63% MORE ENERGY EFFICIENT
THAN A 3-STAR RATED SPLIT AIR CONDITIONER

*1 TR Inverter Split Air Conditioners are 24% more energy efficient and 63% more energy efficient in comparison with 5-Star Inverter Split Air Conditioners with 5.0 ISEER and 3-Star Inverter Split Air Conditioners with 3.8 ISEER respectively.

**In standard test conditions.

HOT & COLD INVERTER TECHNOLOGY

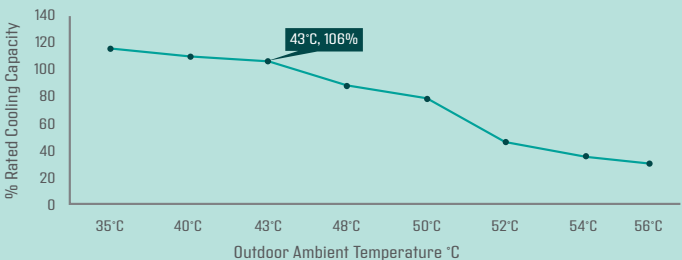

Blue Star's Hot & Cold Inverter AC cools in summer, warms in winter, de-humidifies in the monsoons and ensures utmost comfort throughout the year. With stringent testing norms, Blue Star's Hot & Cold Inverter Technology provides warmth even at -10°C and cools even up to 52°C^* , with minimal derating, in extreme conditions. Blue Star's Hot & Cold range comes in two variants designed to meet the extreme ambient environments of -10°C to 50°C and -2°C to 52°C .

HEAVY DUTY AIR CONDITIONERS

The Heavy Duty range incorporates a powerful compressor that delivers enhanced cooling even at 56°C . The specially designed outdoor units comprise a large heat exchange condenser system, a bigger indoor unit and 4-way swing. Heavy Duty Air Conditioners can deliver up to 50 ft. air throw, making them an ideal choice for large indoor spaces.

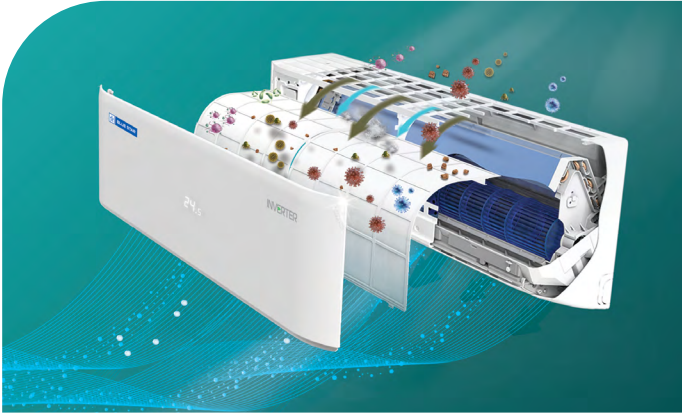

Heavy Duty Air Conditioners 100% Cooling Capacity Even at 43°C

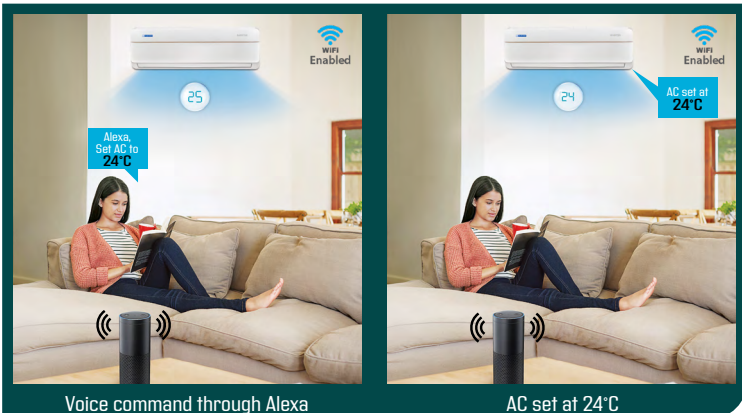

ANTI-VIRUS TECHNOLOGY

This technology comprises unique double layered filters to effectively remove microorganisms, viruses and bacteria. Through its positive charge, it attracts negatively charged viruses like a powerful magnet and deactivates them when air passes through the filter.

SMART AIR CONDITIONERS

These ACs boast of unique features like Customised Sleep, Scheduler, Multi-grouping of up to 15 ACs and Remote Service through an app. With Voice Command Technology, customers can operate their AC through their smart devices.

Voice command through Alexa
